

Art- We will be learning about the artist Georgia O'Keefe during this topic, using her work on flowers as a stimulus for our own sketching and sculpture work.

PSHE- Rights and Responsibilities

RE - Celebrating New Life (Easter)

Music - Round and Round

PE - Net & Wall Games/Co-operative Games

ICT - Paint (ART) programs

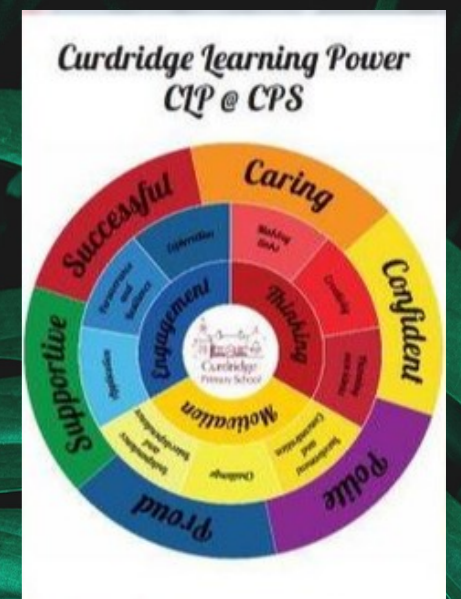

### Home Learning

Your child will be bringing home a planted seed we would like them to care for. We would also like your child to complete a 'Seed Diary', describing how they are caring for their seed and any changes they observe. Ideally this would be completed weekly and brought back into school after the Easter break (Monday 13th April), hopefully giving the seed time to grow!

Also, if you see any signs of Spring in your garden or whilst you are out and about, it would be lovely to talk to your child about these.

# Year 1 & 2 Plant Doctor

## Our Learning

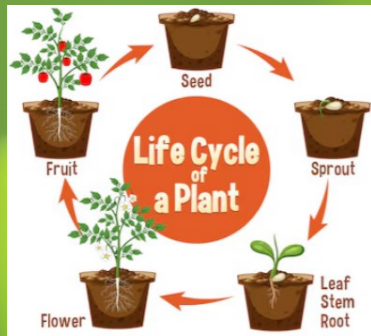

This half term will focus on Science and Geography, with all the signs of Spring to inspire us!

We will be planting some mysterious seeds and finding out how we can care for them to find out what they will grow into.

### Science: !

During our Science lessons we will be

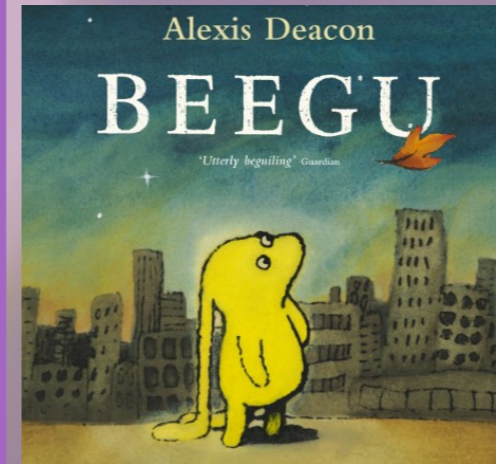

learning about the life cycle of plants; using new vocabulary such as germination and seed dispersal. We will be investigating growing conditions and how these affect a plant's growth and we will find out how some plants adapt to survive in different habitats.

### Geography:

Throughout this topic, we will be looking at the seasons and learning which months fall into each one. We will focus on Winter and how things start to change as Spring approaches; looking for signs of the season changing in and around the school grounds.

### English:

In English we will be reading the book 'Beegu' by Alexis Deacon.

We will be exploring different characters' feelings in the story and will be practising our writing skills by writing diary entries in role as these characters, using adjectives to describe emotions.

### Maths:

This half term we will be focussing on Multiplication and Division. We will be counting in 2s, 5s and 10s, and linking this to the times tables for Year 2 children. We will be discovering arrays and how they can be used to help us multiply and divide. As well as exploring dividing as 'sharing' and 'grouping.' We will also continue to practise knowing our number bonds to 10 and 20.
